## Who we are

#### THE TEAM

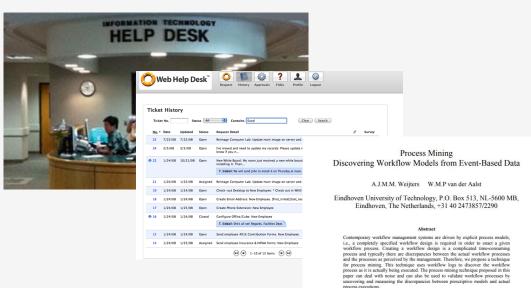

#### Technische Universität München

#### **THE PROJECT**

#### 1. Introduction

During the last decade workflow management concepts and technology [2, 9, 10] have been applied in many enterprise information systems. Workflow management systems such as Staffware [BM MQSerice, COSA, etc. offer genetic modeling and enactment capabilities for structured business processes. By making graphical process definitions, one can configure these systems to support basiness processes. Bields pure workflow management systems many other software systems have adopted workflow technology. Posnite its monitories many modulem area mecoanted used motification used flux

#### **CELONIS TODAY**

**Deloitte.** Technology Fast50

## CELONIS IS AN INNOVATIVE, AWARD-WINNING SOFTWARE COMPANY AND THE MARKET LEADER FOR PROCESS MINING.

- We make our customers more successful
   By improving every process throughout their organizations
- We work with leading customers in the world
   More than 350 enterprises are already Celonis customers
- Among fastest growing software companies in the world 4.000% over the last 4 years, 300% yoy
- Backed by world class investors Accel & 83 North/ Greylock (Facebook, Dropbox, Spotify, Slack, AirBnB, LinkedIn)

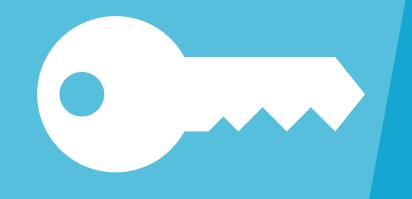

# But.... What is PROCESS MINING?

Customer centricity	Shorter product cycles	Robotization
Winner-takes-it-all markets	Global, complex and digital supply chains	Mass customization of products

### **ENTERPRISE ACCELERATION**

## How to find out what really happens in business processes?

How do you learn about harmful bottlenecks, inefficiencies and compliance issues?

**b** How do you find out where to improve your processes?

#### How do you get insight into business processes?

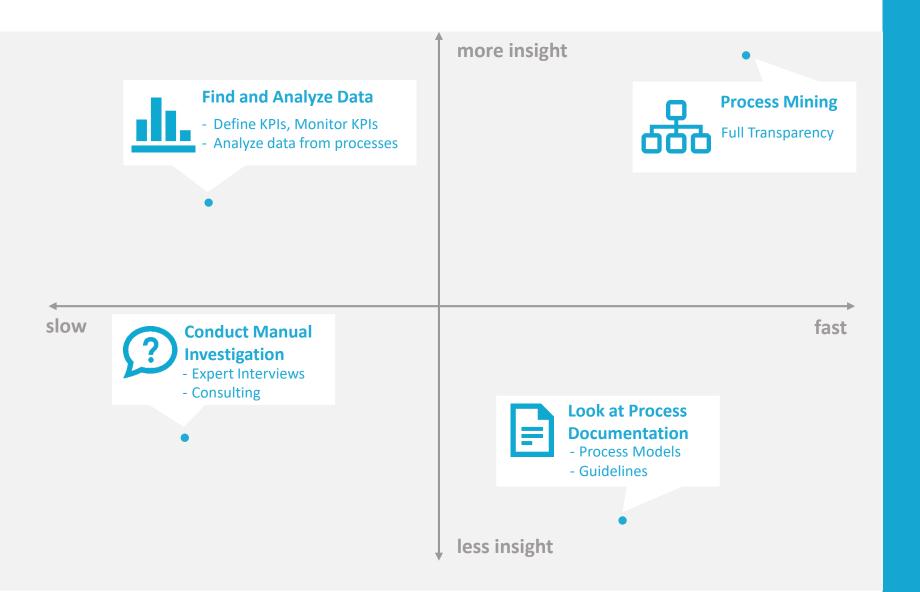

The methods currently available are not efficient or powerful enough.

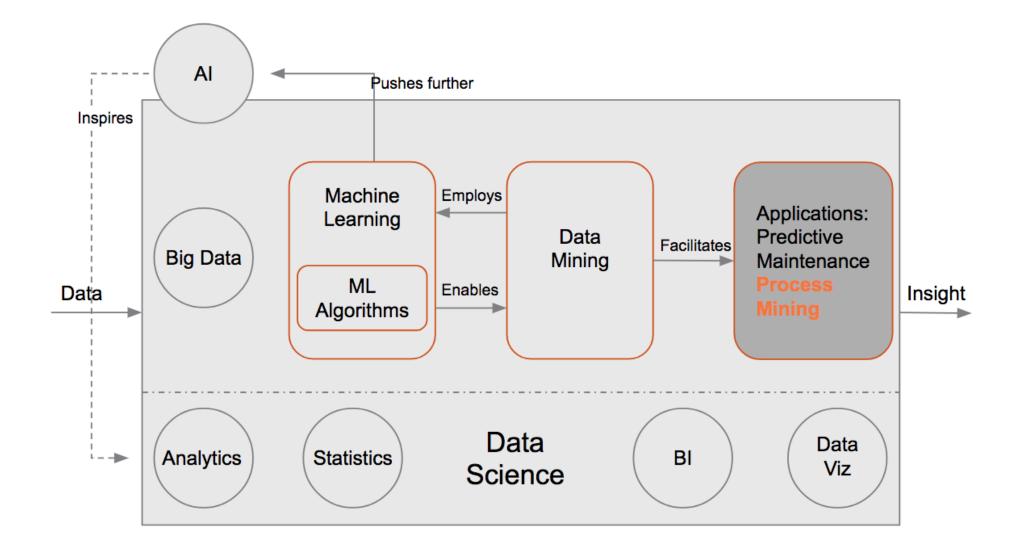

#### How do you get insight into business processes?

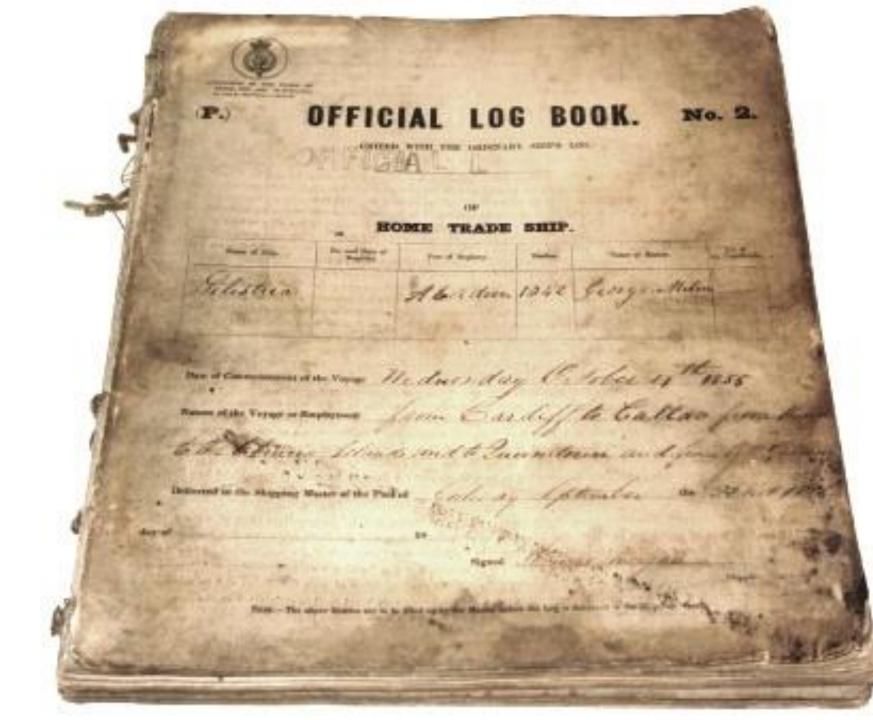

#### Time for a change: Switch on the lights!

#### Purchase-to-Pay (P2P)

- Core business process
- High number of transactions
- Complexity: Requests, approvals, timelines

5 5° 3

• Various departments involved: Procurement, Accounting, Warehousing,...

Please open the P2P process and navigate to the "Variant Explorer" sheet. In this step, you will learn how to interpret the process graph and how to identify inefficiencies and bottlenecks. Please note that one or multiple answers might be correct.

#### **YOUR TASKS** Please answer the following questions using the functionality of the variant explorer.

- 1. How many purchase order (PO) items follow the second process variant?
  - a. 37,270
  - b. 38,089
  - c. 107,688
  - d. 149,376
- 2. What's the overall average throughput time (in days) for the happy path from process start to end?
  - a. 28
  - b. 30
  - c. 38
  - d. 655
- 3. Display the first 17 variants in the variant explorer.
  - How does the 17<sup>th</sup> most common variant look like (use process animation)?
    - a. The quantity is changed after the purchase requisition item is created
    - b. The purchase order item is blocked after the order is print and sent
    - c. Payment blocks are set and removed
    - d. The currency is changed after the order is print and sent

Now you will learn to explore the power of filtering and how to get deeper insights into business processes. Please answer the following questions using filters within the "Variant Explorer" sheet.

#### **YOUR TASKS**

4. How many different variants exist for PO items with price change?

a. 1

- b. 3
- c. 68
- d. 655
- 5. Let's look at PO items without purchase requisitions. How does the second most common variant look like for those?
  - a. The process starts with the scan of the invoice
  - b. The purchase order items are deleted
  - c. The purchase order items are refused
  - d. The price is changed after purchase order is sent out to vendor
- 6. Filter on purchase order items that are blocked (show the 10 most common variants), yet not reactivated. How does the main variant look like?
  - a. After blocking the purchase order item, the quantity is changed
  - b. The process ends with the purchase order items being blocked
  - c. After blocking the purchase order item, the goods receipt is cancelled

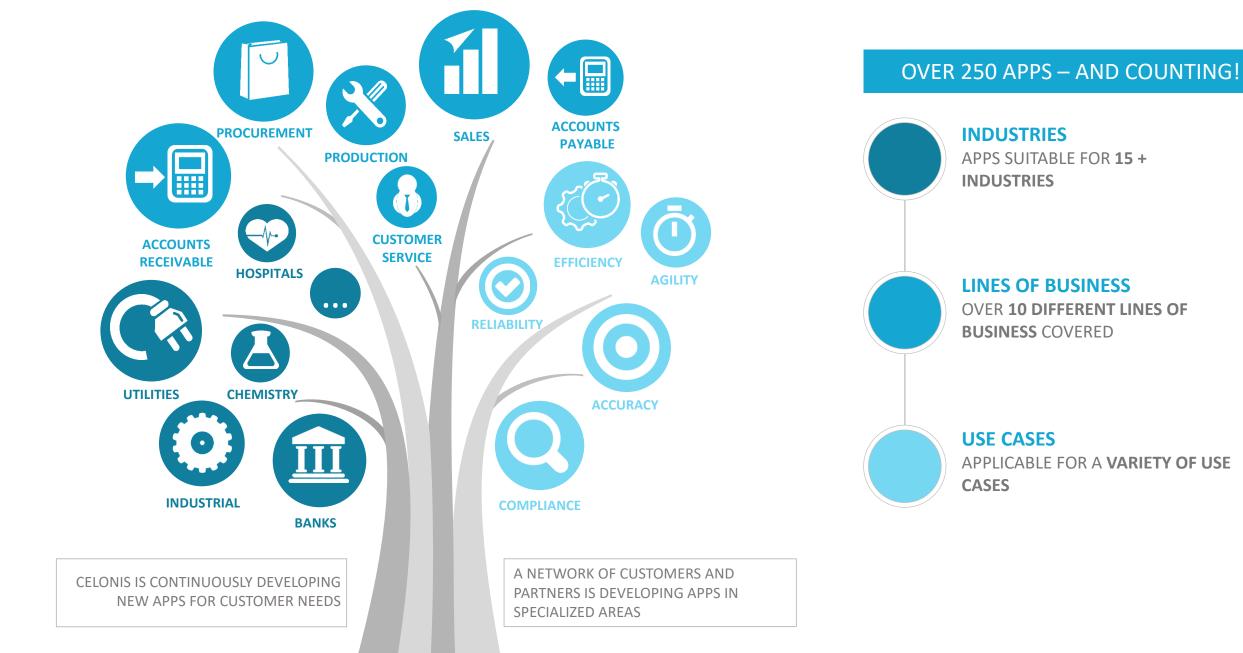

After learning the basic functions in Celonis, you continue with a more in-depth analysis of the process. For this task, go to the "Analysis" and the "Details" sheet.

#### **YOUR TASKS**

- 7. Look at purchase order items without purchase requisitions. Who is the dominant vendor for these positions in terms of net value?
  - a. IDES Consumer Products
  - b. C.E.B. Barcelona
  - c. Tiefland Glass AG
- 8. Have a look at Unisono AG (top 3 vendor in terms of number of PO items).
  - Observing the number of PO items and the net value over time, what attracts your attention?
    - a. There is an unusual peak in the net value in September 2016
    - b. The number of PO items is strongly decreasing over time with December 2016 being the month with the lowest net order value
    - c. There is a high accumulation of purchases towards the end of the year with a peak in net order value in November 2016
- 9. In the "Details" sheet, have a look at the PO item with the Purchasing Document Number 0000097360. What is the material group of the goods being ordered?
  - a. Monitors
  - b. SMI Demo Scenarios
  - c. Bulbs

#### **CELONIS CONTENT STORE**

## **Celonis Pl** Process Mining becomes smart

#### **PI FEATURES**

Celonis PI (Proactive Insights Engine) combines Process Mining with machine learning and A.I. to achieve highly intelligent and fully automated insights.

#### PI Conformance

Compares actual operations to designed processes (conformance checking) and automatically identifies the highest priority issues and their root causes, so you can take immediate action.

#### **PI Machine Learning**

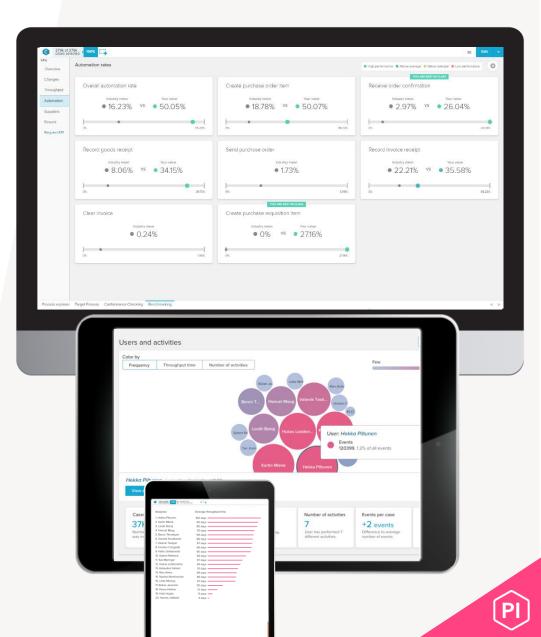

PI Machine Learning integrates the most sophisticated machine learning and statistical algorithms natively into all Celonis analyses. The possibility to integrate any R-Library or statement into Celonis will allow every user to apply advanced prediction techniques.

#### PI Social

Use PI to gain a deep understading of the human aspect or your processes. Identify which teams have the best outcomes, which interactions result in lost time or bottlenecks, or discover where inneficiencies in organization structure call for improvement.

#### **PI Companion**

Identifies potential issues before they even happen and allows users to make the right decisions during process execution rather than after a problem arises.

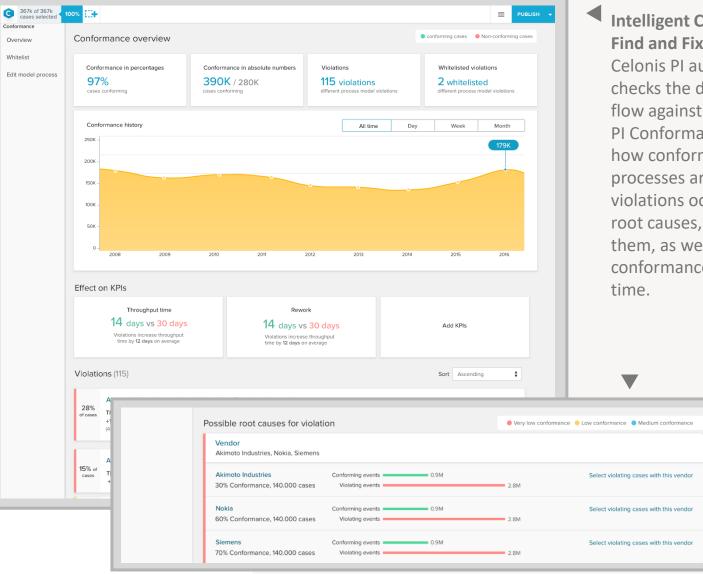

#### **PI CONFORMANCE**

#### **Import Your Process Models**

Import your existing processes (BPMN files are supported, from eg Aris) to test their conformance. Or create and edit process models with the built-in *Celonis Business Process Modeler*.

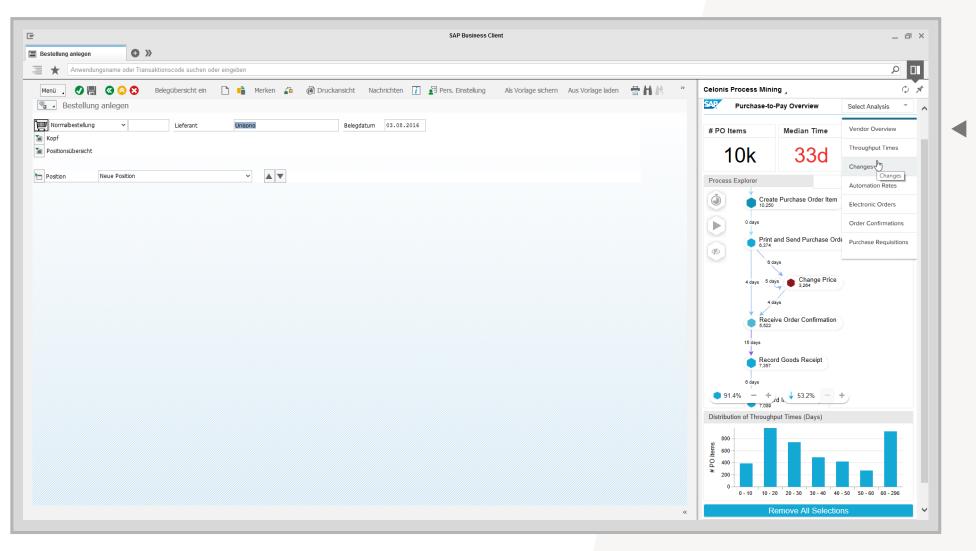

Intelligent Conformance: Find and Fix Violations Celonis PI automatically checks the desired process flow against the real one. PI Conformance shows how conformant your processes are, where violations occur, possible root causes, how to fix them, as well as conformance trends over time.

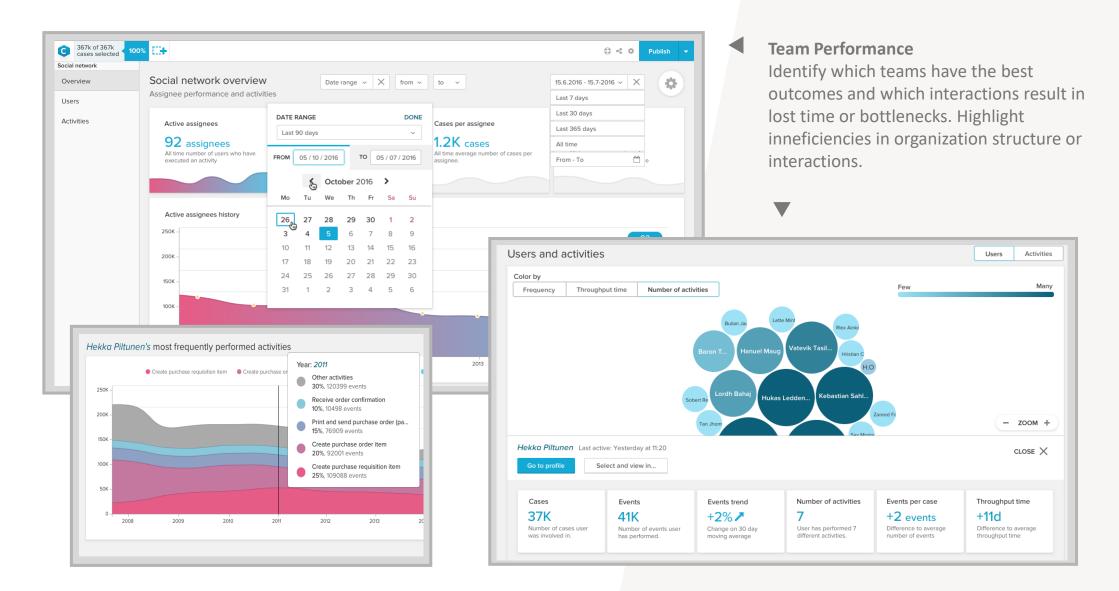

#### Unlimited Possibilities to Shape the Future PI Machine Learning opens the door for all analysts to integrate any statistical method and machine learning algorithms to his Celonis analysis. The full support of R-Scripting language – the world's most popular statistic language – with one click integrates millions of ready to use tools into Celonis.

PI

### **PI** Companion This certified addon interacts with SAP systems and supports your decisions by using relevant data from historical transactions. Need a fast delivery? Check which vendor had the fastest delivery record last month! Cautious? Keep an eye on your customers' payment behavior for well-grounded decisions on payment terms.

# A look into the future

# THE FUTURE

By 2020, Celonis' Process Mining technology for Big Data Analytics will be deeply embeded in every large company as a business critical application in the race for the fastest, most efficient and most transparent processes.

# **Become a Celonaut!**

# **Celonis is a great chance for you because you'll...**

...join a **worldwide leading** Process Mining provider and get in touch with Fortune 500 companies.

...meet some of the **most experienced** Data Scientist in the practical field of Process Mining.

...gain **international know-how** in a young, multinational and dynamic team of passionate people.

...add tangible value to our customers and the company.

... have **zero bureaucracy** to get things done and make a direct impact.

... work in a **fun**, relaxed and rewarding environment.

You want to become part of the fulminant success story of Celonis?

Apply now!

jobs@celonis.de

@Celonauts

Do you want to boost your skills and your career? Do you want to change the way businesses operate?

Celonis Academic Alliance exclusively invites you to become a certified Process Mining expert.

### How does it work?

- Complete the e-learning on Process Mining including videos, readings and challenges
- Get a valuable and professional certificate for your CV
- Use your Celonis software license

**How much does it cost?** Nothing. Exclusively for the first students signing up.

# **PRE-REGISTER NOW!** https://www.celonis-academic.com/

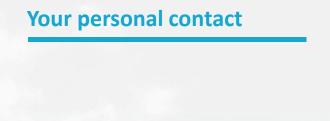

### **BPI Challenge 2018**

- Celonis sponsors the Business Process Intelligence (BPI) challenge 2018.
- Analyze a real-life event log .
- The best submissions will be awarded at the 14th BPI Workshop in Sydney (September 9-10, 2018).

To participate in the challenge, download the data set at the **BPI website**.
